Simplify your Operation*

Ensure Maximum Compliance and Simplify your Operation

At Keystone Cleanroom Products, we understand the critical importance of maintaining sterile environments in pharmaceutical manufacturing. That's why we offer a comprehensive line of pre-sterilized products designed to meet the highest standards of cleanliness and safety.

**Sterile Sharpie
Markers**

Sterile BIC Pens

**Sterile Cleanroom
Trash Bags**

Sterile Mop Bucket Liners

Pre-Sterilized Sterility Maintenance and Transport Bags

Pre-Sterilized Zip-Lock Bags

Pre-Sterilized Mop Bucket Liners

The use of Pre-Sterilized Mop Bucket Liners eliminates the need to clean and sterilize mop buckets before and after each use. The liners will extend the lifespan of stainless-steel buckets. Clean on your own schedule without having to wait for janitorial autoclave loads to be completed. This frees up valuable autoclave resources and reduces the utility costs on expensive steam and WIFI. The use of the liners minimizes the risks of spreading mold spores during cleaning.

Pre-Sterilized Trash Can Liners

Simplify the removal of waste from your aseptic cleanroom without introducing external sources of microbial contamination, by using gamma irradiated trash liners.

Gamma Irradiated Media Plate Transport and Incubation Bag

Eliminate the risk and expense of investigating the root causes of False Positives with Keystone Cleanroom Products' Gamma Irradiated Media Plate Transport and Incubation Bag System. The system provides complete protection from the time the plates are removed from inside the isolator all the way through incubation.

Pre-Sterilized Zip Lock Bags

Pre-sterilized zip lock bags are designed to reduce the risks of producing false positive media plates. This system provides complete protection from external sources of microbial contamination from the time the plates are removed from the isolator through incubation. The clear film material offers excellent clarity combined with strength and durability. These bags feature an integrated slide lock zipper seal for consistent and efficient sealing using the isolator gloves.

Pre-Sterilized Pens and Markers

Gamma-irradiated pens and markers satisfy the regulatory requirements of the control of writing instruments used inside the aseptic areas. Eliminates the unreliable and expensive surface sanitization of the writing instruments prior to their introduction and initial use inside aseptic environments. Allows the introduction of a new, single pack of pens and/or markers for each shift. Simplifies the tracking of cleanroom writing instruments. Can be supplied in any combination of Sharpie® markers or BIC® pens.
